

FINGER SCRAPER - PRESS RELEASE

February 2016

Infinity Belting Launch's Conveyor Belt Finger Scraper Design

Infinity Belting Ltd. Is a conveyor belt sales and services' company located in Stony Plain Alberta, Canada. With several field crews and over 150 years of combined experience, they are well positioned to evaluate conveyor design, maintenance and life cycle issues and offer cost effective solutions to material handling design engineers, operators, plant managers and maintenance personal.

When one of their clients, using current brush technology and thoroughly frustrated with its poor performance stated "I wish someone would come up with a scraper for cleated belts that actually works", Infinity Belting Ltd. Took on the challenge and for the past three years they have tested their new design on cleated & smooth belts with great success.

The Finger Scraper is currently in use in the following industries; Agriculture, Co-gen, Bio-mass, Boal, Tire Re-cycling, Coke, Aggregate, Lime Stone, Saw Mills, Pulp & Paper. Not a single unit has failed to per form up to expectations. The Finger Scraper is now patent pending with formal patents awaiting final issuance.

The following Customer Quotes are the definitive response to the Finger Scraper design:

From the plant process manager in one facility of the largest tire recycling Company in North America:

"Again I would like to ensure that you and your team know that you have developed an essential tool in respect to housekeeping and preventative maintenance, and in my opinion should be a standard feature on all conveyors".

From a Major Northern Alberta hog fuel fired Co-gen operation:

"These brushes would plug up after days of installation and are useless. After installing the Finger Scrapers from Infinity, they removed the majority of the fiber sticking on the belt and did not plug up, even when working at -40C".

"...you have developed an essential tool in respect to housekeeping & preventative maintenance, and in my opinion should be a standard feature on all conveyors."

-North American Tire Recycling
